Introduction

This document presents the evaluation methodology for Canvas Learning Management System (LMS) training for college faculty. The goal of the training program at the college, as set by the Provost and academic leadership, is to establish consistent usage of key skills in Canvas to improve student experience for a variety of modalities, including online and in-person. This evaluation management plan will address the justification of our evaluation questions, describe the evaluation's design including measures and instruments we will use, and conclude with a plan to report the results to key stakeholders at the college.

Evaluation Management Plan

This report builds on the prior systemic analysis of the training program. The LMS used at the college is Canvas, which is one of the most frequently used Learning Management Systems in higher education (Hill, 2023). Although adoption across the sector is popular, Canvas can be utilized in various institutions in slightly different ways, and incoming faculty may have wide-ranging levels of experience with the tool, from novice to expert. Thus, the training program at the college is offered in several permutations to meet the needs of diverse audiences. Trainers for the program also come from varied backgrounds; an evaluation management plan and communication goals are needed to report on its success. As this is a complex system with many moving parts, the subsequent sections describe the evaluation questions to be answered and identify methods and sources for collecting the required data.

Justification of Evaluation Questions

Figure 1 (below) first presents the issues and related evaluation questions to be examined at the process and implementation levels, then describes the issues and evaluation questions at the outcome level. The training components identified below are derived from Darabi and Arrington's (2017) Systemic Logic Model for Evaluation of Training Programs and Evaluation Management Plan.

Areas of Evaluation Focus	Relevant Training Features	Issues to be Addressed	Evaluation Questions	Type of Information to Collect	Collection Method	Information Source
Training Inputs, Process, and Implementation	Organizational Plans & Setup	Training set up as required by training plans and purpose	1. Are all trainings set up as required by the training plans and purpose?	Qualitative	Extant Data	Training plans, online course map
					Observations	Online course, classroom layout
			2. Are all the necessary supplies present and well maintained?	Mixed	Questionnaire	L&D Team members, Trainers
	Instructional Modules & Modality	The quality and relevance of training modules and modality	1. Are the trainings sufficient to meet objectives?	Qualitative	Extant Data	Training plans, online course map
			2. Are the trainings of good quality?	Mixed	Questionnaire	Trainers, L&D Team members
					Extant Data	Quality review results
					Observation	Online course, classroom delivery
	Trainees' Readiness	Prerequisites and motivation for training	1. Do participants have appropriate access to the trainings according to their roles?	Qualitative	Extant Data	Training enrollment list
					Interview	L&D Team members
			2. Do participants have the correct prerequisite skills to complete training?	Qualitative	Extant Data	Application packets/Bypass form
			3. Are participants motivated to participate?	Mixed	Questionnaires	Faculty supervisors, Trainees
	Trainers' Qualification	Experience and expertise in training	1. What are the trainer's qualifications?	Qualitative	Extant Data	Trainer resumes, Faculty trainer application packets
			2. How are trainers selected?	Qualitative	Interview	L&D Team members
			3. How many trainers are there?	Qualitative	Extant Data	Trainer data (L&D Team)
	Organization Support for Training and Transfer	Sufficient support and resources for training and its transfer	1. Do the training resources match workplace resources?	Qualitative	Observation	Online course, classroom delivery, workplace
			2. Are the supports (if applicable) in place?	Qualitative	Interview	L&D Team members, Faculty supervisors
			3. Do the trainees have access to online support?	Qualitative	Observation	Online course/LMS function
					Interview	L&D Team members
	Training Process, Implementation and Monitoring	The training being implemented and monitored according to the plans	1. Are the required modules being taught?	Qualitative	Extant Data	Training plans, online course map, professional development calendar
			2. Are the assessments given in the manner described?	Qualitative	Observation	Online course, classroom delivery
Training Outcomes	Enhanced Trainees' Satisfaction	Satisfying training experience	1. Are the participants satisfied with their training experience?	Mixed	Questionnaires	Trainees
	Improved Trainees' KSA	Positive changes in trainees KSA	1. Are the participants learning the knowledge required to use Canvas effectively?	Mixed	Questionnaires	Trainees, trainers
					Extant data	LMS assessments
			2. Are the participants learning the skills necessary to use Canvas effectively?	Mixed	Observation, Extant Data	LMS assessment data, trainers
			3. Are the participants leaving training with improved skills in LMS usage?	Quantitative	Pre/Posttest	LMS assessment data, trainees, trainers
	Improved Trainees' Job Performance	Positive changes in trainees' job performance	1. Are the participants applying the knowledge and skills they gained from the training on the job?	Quantitative	Extant Data	LMS usage reports
			2. Are the participants able to use the skills in subsequent semesters?	Qualitative	Interviews	Trainees, L&D Team members
	Improved Organizational Performance	Changes in organizational gains due to the training	1. Does the participant performance in LMS skills correlate to reduction in student complaints about LMS usage in online and face to face classes?	Mixed	Extant Data, Questionnaires	IT tickets, Faculty supervisors
			2. Are the participants doing their job to high quality online teaching standards?	Quantitative	Questionnaires	Faculty supervisors, Online learning team

Figure 1. Evaluation Management Plan, with expanded evaluation questions.

Process Evaluation Questions

Process evaluation addresses the training content, delivery methods, trainers, engagement, and logistics of training. In summary, these evaluation questions focus on the implementation and facilitation of the training program. This information is vital for understanding how effectively the training was implemented and whether it meets participants' needs. It also helps identify adjustments needed to optimize future sessions, ensuring continuous improvement in training facilitation. As there are many training variations to monitor in the process evaluation, Appendix A contains a list of the training opportunities available, the targeted level for each training, and trainers assigned to each session. This list will help to identify some sources of data for the evaluation identified during the systematic analysis.

EQ1: Is the training appropriately set up as required by the training plans and purpose? Since this training program offers some flexibility concerning the delivery of the training sessions, each offering will have to be evaluated based on the modality used and the target audience. Learners will need access to Canvas LMS no matter how the training is carried out, but the training plan for teaching a given skill will not deviate; learning to use the Gradebook will require the same instructional content and skills practice in beginner, intermediate, and advanced trainings. Learners work within the LMS with the trainer's guidance to maximize their learning. However, in-person and online offerings differ significantly in terms of their training plans and supplies needed. The online asynchronous training courses in Canvas must be reset for each new offering; in-person training must be in a reserved computer lab for a 2-hour block; in-person bootcamps require supplies such as reusable help guides and handouts. The evaluation will validate whether training is set up as expected.

EQ2: Is the content relevant and the instructional modality appropriate? The training content needs to reflect the needs of various faculty and their use of Canvas LMS. This will cause sessions to differ in relevance based on the training audience, but since the overall functionality of Canvas LMS is standardized, training plans should be able to address objectives appropriate to each audience with enough time for questions. Ideally, faculty will be guided to enroll in the correct training by their supervisor or self-select into appropriate training, but that might not always be expected. Thus, trainers should be prepared to know their training audience and what their specific role-based needs are to redirect to more advanced training opportunities if needed. Finally, as Canvas is an LMS with features that are updated regularly, the training content must be examined for currency and relevance. The online training content and in-person training plans can be investigated to ensure its quality, relevance, and alignment with the trainees' daily responsibilities.

EQ3: Are the trainees qualified and ready for training? Most trainees will have a background in higher education and may have used LMSs in prior roles in their academic careers. While some adjunct faculty come from industry and may have no experience with an LMS, basic computer literacy is part of each trainee's daily work duties, and thus prerequisite computer skills will not need coverage. However, access to the LMS may be a hurdle if newly hired faculty are not granted access to Canvas before attending a training. The evaluation should also address the motivations of participants beyond the administration's requirement to use skills such as gradebooks, syllabi, and announcements. Understanding faculty motivations to learn LMS skills will also help shape more advanced training opportunities in the program.

EQ4: Are the trainers qualified to conduct the training? Trainers in the program come from the Canvas vendor, staff in the college's Learning & Development and Online Learning offices, and Canvas superuser faculty. Trainers need to have previous proficiency in using

Canvas LMS and facilitation skills to carry out training plans in a higher-education setting. Currently there is no formal process in place to determine the best candidate for each offering. In most cases trainers volunteered to carry out the sessions. Ideas for increasing the skills of the trainers include taking the trainings themselves and helping with the development of the online course spaces in Canvas, so that they are familiar with the content. Some trainers will be members of the staff, with extensive training in Canvas LMS; faculty trainers will have experience with Canvas since it is the LMS used across the organization.

EQ5: Are there sufficient organizational support and resources for training? College administration also announced and supported the organizational change to utilize more LMS skills. Training sessions do not incur any costs outside of the original development time and person-hours required to deliver training. Importantly, the subject of this training allows for near-perfect situational learning to occur. Since the training will focus on Canvas LMS and trainees will be learning via Canvas LMS itself, they will learn in the exact place that they will eventually demonstrate their learning. Finally, learning resources such as handouts and job aids can be hosted in Canvas LMS to reference long after the training offering, and it is important to determine whether those supports exist for trainees.

EQ6: Is the training implemented and monitored according to the plans? As the department with the most responsibility for the training program, the Learning and Development team will need to monitor sessions and ensure that the curriculum is being carried out according to the plans. Learning and Development (L&D) team members should participate in each offering and answer questions during and after the training. As mentioned above, the online training courses' unique situational learning position within Canvas LMS itself allows for discussion and review to occur long after the training has been completed. The in-person training opportunities such as the LMS Camp and the beginner session (LMS 100) will also need to be monitored to ensure they are scheduled and led appropriately. An L&D team member will be able to determine whether the curriculum and assessments are being delivered as expected across all trainers.

Outcome Evaluation Questions

The outcomes of training are evaluated across Kirkpatrick's Four Levels of evaluation: Reaction, Knowledge, Behavior, Results. Kirkpatrick's Four Levels of Evaluation provide a comprehensive framework for assessing the outcomes of training programs. Each level builds upon the previous one, offering a deeper understanding of the training's effectiveness and its impact on both individuals and the organization.

EQ7: Was the training experience satisfying to participants? Since the training program addresses different needs for various audiences, different methods and modalities

(e.g., lectures, hands-on skills activities, or online group discussions) are employed. Making use of Keller's ARCs model could help make each session more relevant to the participants (2010). There are numerous resources online that help distill the model in intuitive ways so that trainers could adopt it without much strain. Evaluating participant satisfaction with the methods provides insight into their effectiveness in helping participants understand and retain the material. It also identifies whether the chosen methods keep participants engaged or if they require modification for future training sessions.

EQ8: Is there any positive change in the learners' KSA as a result of this training? Completion of the training will involve trainees' demonstration of their skills within Canvas LMS itself. Formative assessment can be used to determine trainees' knowledge gains throughout the training. In addition, each step of the training will rely on their knowledge gained to proceed. In this way, each learner can see their growth and it can also be monitored by trainers, particularly in the advanced online training (LMS 101). While attitudinal changes are not a focus of this training, there should be an increase in trainees' readiness to use Canvas LMS as they become more proficient in its use.

EQ9: Has the trainees' job performance improved as the training mandated? The widespread use of Canvas LMS across the organization should ensure that trainees become proficient in its use. The training sessions offered will not be the only support they receive with the application of their new skills as resources will be hosted within Canvas and faculty peers will have completed this training. After attending training sessions, with knowledgeable peers, and armed with resources, the organization should expect that most faculty will be able to continue to use required skills such as posting syllabi, adding announcements, and managing the gradebook in subsequent semesters without need for retraining.

EQ10: What are the organizational gains due to the training and related to the training purpose? This training program ensures that trainees are given time and instruction to become proficient in the use of the LMS at varying levels according to their needs. Since the basic training is required for new faculty and beginners, the adoption and seamless integration of Canvas LMS should improve over time with its daily use. For online courses, consistent use of more advanced features should lead to smooth delivery of online courses and recognition of quality online education. The ability to use the LMS fluently helps foster a consistent and supportive educational experience for students across the college regardless of course modality. Additionally, a successful training program should lead to a reduction in student complaints about grade transparency or tickets submitted to IT from students regarding inoperable online courses. This is an organizational gain as the low cost of training can offset the cost of losing student revenue or the costs of resolving student issues.

Evaluation Design, Measures, and Instruments

Due to the various methods used in carrying out this training, there will need to be some flexibility in measuring and analyzing each training offering. Below will be found a justification of the instruments used to ensure that the training was carried out according to the plan as well as an evaluation of the effectiveness of the plan overall.

Process Evaluation

The evaluation methods, measures, and instruments discussed below relate to the process evaluation, which includes elements identified in the systemic analysis.

EQ1. Is the training appropriately set up as required by the training plans and purpose? It is vital to understand that the training plan was followed in each training, otherwise results cannot be guaranteed, much less evaluated effectively. The simplest way to do this is to attend sessions, but also review the work done in the asynchronous Canvas training course. Since the trainee work will be stored for review, it will involve logging in and ensuring that each part of the training plan was followed and that the trainees accomplished the goals within. Attending sessions allows for immediate feedback to trainers should they stray from the training plan and will help curb further misalignment.

EQ2. Is the training content relevant and the instructional modality appropriate? Once there is assurance that the training plan has been followed, it is necessary to examine the work done by trainees to see that they are successful in achieving the learning objectives. The trainings will familiarize them with Canvas LMS and equip them with the skills to set up their own courses to meet organizational requirements. Therefore, there will not only be an examination of what was accomplished in the training, but a follow-up with a random selection of participants after the training. Since this training is done by the college staff and faculty, it will be simple to schedule time with a random selection of trainees to have follow-up interviews. Here again is another chance to curb misunderstandings as those who are still struggling with the skills will be pointed to the necessary resources to further train them. During these interviews, members of the training team should review the courses that each trainee is publishing. Canvas' reporting system can support this evaluation for the learning team to verify use without having to manually review examine courses. In this way, they can see how effective each trainee is at employing their learned skills in Canvas LMS. Interview questions will be used (see Appendix B) to guide discussion with trainees and determine if they are skilled enough to run their courses or might need more training. Participants will have time to discuss how the training might be made more relevant in future offerings. Discussions should be carried out with leadership at the organization to determine incentives that can be

provided to those who complete post-training interviews to increase participation and willingness.

EQ3. Are the trainees qualified and ready for training? The systemic analysis revealed that trainees will enter training at various levels. Some will have used Canvas LMS in previous roles and there will also be varying levels of mastery when it comes to computer literacy and technology capability. Therefore, it is vital to determine what level of skills each participant possesses and to direct them to the proper offering. For those who have completed training in Canvas LMS at a prior institution, there is a bypass form (see Appendix C). Along with the questionnaire, documentation can be attached to prove completion of previous training. For those faculty engaging in either face-to-face or online teaching, LMS 100 will be sufficient. For any trainees who need to skill up, LMS Camp is offered to cover some of the skills they will need to demonstrate in both 100 and 101. At any time, faculty can schedule LMS Consultations to cover specific areas in which they need help. For the more intermediate and advanced training sessions, LMS 101 and LMS+, trainees will have to complete the prerequisites to ensure they are ready for the higher level KSAs and topics covered. The surveys following the training (see Appendices D & E) will help the training team evaluate the content level of each training to ensure its accuracy and feasibility.

EQ4. Are the trainers qualified to conduct the training? Mentioned above is the fact that faculty trainers have typically volunteered to lead training sessions, but there are plans for developing a more formal process for ensuring each trainer is equipped with the necessary skills. Proposed ideas include the following:

Members of the training team will have completed each of the training sessions that they plan to lead and will have worked within the training team to manage each of the Canvas courses used for the asynchronous training offerings. Selection will be based on experience, where less experienced members are asked to co-lead sessions with more experienced members when they are preparing to run a session independently. This system equips trainers to gain mastery within Canvas LMS and foresee pitfalls within the delivery of the trainings.

EQ5: Are there sufficient organizational support and resources for training? There is little worry about support within the organization for this training. Since this is the LMS used by the organization and the training has been developed using the LMS itself, the learning is situated appropriately to aid carryover for trainees. The costs for the training are mostly incurred in human work hours as there is no additional cost to start and run additional training sessions. Organizational leadership sees this training as a mandate and requires all faculty to demonstrate competency in Canvas by minimally publishing the syllabus, announcements, and gradebook. It will be vital to continue developing the process of equipping trainers through some of the ideas mentioned above.

EQ6: Is the training implemented and monitored according to the plans? Session quality will be measured with quantitative data through participation satisfaction ratings and qualitative feedback in the form of content delivery (Appendix B). L&D teams members would also be responsible for conducting observations and reviewing Participant Surveys (Appendix D). L&D team members would prepare reports summarizing training observations, feedback, and identified gaps.

Outcome Evaluation

EQ7: Was the training experience satisfying to participants? The organization maintains Level 1 (Reaction) feedback forms for their training sessions (Appendices D & E). Questions about content aim to uncover whether the material was engaging, comprehensive, and appropriately targeted. Evaluation of the trainer focuses on their ability to deliver content effectively, address questions, and create an inclusive and interactive learning environment. Questions related to engagement assess whether activities such as discussions or practical exercises enhanced learning or if the sessions lacked interactivity, which could hinder the overall effectiveness. Evaluating logistics ensures that the training environment is conducive to learning and free from distractions or technical issues. While the online and the in-person feedback forms differ slightly, similar questions regarding the trainers and materials exist in both training types.

EQ8: Is there any positive change in the learners' KSA as a result of this training? Interviews are used to check in on trainees after the training is offered to ensure that they are successful in implementing their courses in Canvas LMS. In Appendix D, Question 1, 5, and 6 measure if there were any positive changes in KSA from the trainee perspective. At the conclusion of the training, learners will also take the Post Training Assessment (Appendix B), a couple of weeks after the training is completed to measure changes in Learning and Behavior changes.

EQ9: Has the trainees' job performance improved as the training mandated? Follow-up after the training will consist of a post-training self-assessment and for selected trainees (see Appendix B). Since Canvas LMS is a consistent and vital part of instruction within the organization, trainees will have many opportunities to practice their skills and offer trainers a chance to reinforce them. Furthermore, at any time trainees can schedule an LMS consultation to learn targeted skills they may be unsure about. Job performance should improve across the organization with so many opportunities to learn within Canvas LMS itself.

EQ10: What are the organizational gains due to the training and related to the training purpose? Data and instruments used to evaluate this question include trainee feedback and assessments conducted by L&D Team. Quantitative measurements to be used

include post-training assessments, and return on investment (ROI) analysis. Post-training assessment will measure changes in trainee knowledge or skills in relation to organizational gains. ROI analysis will identify the financial returns in terms of training used for organizational gains. Qualitative measurements include interviews and observations. Observations measure workplace behavior post-training to identify improvements or changes.

Evaluation Communication and Reporting Plan

The systematic analysis revealed that the Provost's Office was the primary source of the training program goals and provided financial support to train faculty in the LMS. Two primary offices, the Online Learning office and the Learning & Development office, were charged with developing and managing the training program and coordinating faculty and staff trainers. Providing regular and timely updates on the processes and outcomes of training will be expected to ensure that the program is meeting the established goals.

After one semester, data should be available from 1 LMS 100 offering, 2 LMS Camp offerings, 1 cohort of LMS 101, several LMS+ sessions, and a variable number of bypass applications and completions for the asynchronous version of LMS 100. One semester of data was identified as the first short-term benchmark for published reporting. It can be assumed that this number of offerings would continue for the first year, with potential reductions after a year as more faculty complete basic required training and the training is right sized to meet ongoing needs. As the training program evolves, regular reports could continue after the first year of the evaluation. Figure 2 below lists the communication strategy for the short-term (first three semesters) and mid-term (end of first year) for each audience, but no reports are considered "end of evaluation" at this point. Additional information follows about each identified stakeholder group and the communications they will receive.

Evaluation Communication Plan

Communication Focus	Communication Identifier	Audience (Individual or group of stakeholders who get the report)	Report type (Full report, Summary, Selected parts, Executive Summary)	Report Schedule (Monthly, quarterly, biannually, end of the Evaluation)	Report Delivery Context (Discuss in personal meeting, Present to groups or in a Conference, Mail in)
Process and Delivery Aspects of Training	*1*	Online Learning office / Learning & Development team leadership	Full report	Monthly for 1st 3 semesters	Personal Meeting
	2	Faculty supervisors & trainees	Selected parts	Each semester	Written Report
	3	Trainers	Selected parts	Each semester	Presentation
	4	Provost's Office / Academic Leaders	Executive Summary	Each semester	Written Report
Outcomes of Training	*5*	Online Learning office / Learning & Development team leadership	Full report	Each semester	Written Report
	6	Faculty supervisors & trainees	Executive Summary	After 3rd semester	Conference Presentation
	7	Trainers	Selected parts	Each semester	Written Report
	8	Provost's Office / Academic Leaders	Summary	After 3rd semester	Presentation

Figure 2. Evaluation Communication Plan, outlining stakeholder (audiences) and reporting types, schedules, and contexts.

ComID1. The leadership of the Online Learning and Learning & Development offices were charged with developing, administering, and monitoring the training program. However, since only staff trainers are employees in these departments, monthly reports will be delivered only to the heads of the department for monitoring. These two departments will have to reach out to specific trainers in their departments with any concerns seen in the full report and relay any feedback for faculty trainers to the appropriate academic supervisor.

ComID2. Faculty trainees and their supervisors will receive a written report at the end of the semester with their department's targets to meet the learning goals, support opportunities, upcoming training opportunities, and any decision guides to direct faculty to the appropriate training. These summary reports of only relevant aspects of the training process can be distributed at a regular faculty meeting during the semester.

ComID3. Faculty and staff trainers would receive communication regarding the training process, delivery, and implementation once a semester, especially on areas that are directly influenced by trainers. Important topics to implementation such as room setup, any updates to the training plan, issues encountered by trainers, and so on can be discussed. This would be a brief and informal presentation followed by a question period to ensure that trainers are on the same page.

ComID4. As the primary source of support behind the learning goal, the Provost's Office would receive a written executive summary to understand how the program was deployed. The Online Learning and Learning & Development offices have regular meetings with the Provost and thus a written executive summary should align with what has been reported to those teams by the evaluators monthly. The executive summary would highlight the quality and integrity of the training plans and trainers, and the training program's recognition of faculty trainees that have prior expertise in the field and thus qualify for more intermediate or advanced training.

ComID5. As before, the Learning & Development and Online Learning offices will receive a full written report on the training outcomes. Full data will be provided for those offices to sort through and target specific departments with lower achievement scores, trainer satisfaction scores, and any other areas for improvement or to highlight as successes. Particular attention will be drawn to changes in learner KSAs, transfer to job performance, and Canvas usage data, and any noticeable organizational gains such as reduced student complaints. As the training needs a full semester before some skills are re-used this report will only be given after the beginning of a new semester.

COMID6. Faculty trainees and their supervisors can be motivated by the learning and transfer outcomes from the training program. Faculty gather once yearly for a professional development event sponsored by the Provost's Office, and a presentation on the training program and its benefits and outcomes can be done at this event.

COMID7. All trainers will be interested in receiving their satisfaction and learning outcome feedback from trainees. These will be presented as written reports that can be included in performance evaluations and included in faculty portfolios.

COMID8. Finally, at the end of a full academic year, the evaluation team can present a summary presentation of the training program outcomes, focusing on the organizational gains and achievement levels for learner KSAs. This will be a compilation of highlights from the reports provided to the Learning & Development and Online Learning leadership teams.

Conclusion

Systemic analysis helped identify each component needed for effective evaluation of the program. Following the plan prescribed above should lead to successful evaluation and improvement of the training program. In several sections there are recommendations for improvement that should be considered and adapted into the training, as necessary. Results

will be communicated to the Learning & Development and Online Learning teams to help improve the training program over time, ensuring that it stays relevant and helps trainees achieve carryover into their daily work with Canvas LMS.

Appendices

Appendix A – Summary of training options in the program.

Appendix B – Data Collection Items for Trainees (Interview Questions and Post Training Self-Assessment)

Appendix C – Bypass form with Advanced KSAs.

Appendix D – Participant survey from the asynchronous online course for online facilitation incorporating Level 1 and Level 2 feedback.

Appendix E – Standard Level 1 feedback form from office of teaching & learning. Data from this form is provided for all teaching & learning events and results are available for retrieval for all of the other training opportunities.

Appendix A: Summary of Training Options

Title	Audience	Trainer	Length/ Delivery	Features
LMS Consultations	All	L&D Team	60 min	Variable level Available regularly & by appointment
LMS Camp	Beginner & Intermediate	Faculty trainers, L&D Team	9 hr (drop in)	Rotating workstations Basic KSAs from LMS 100 and some LMS+ KSAs
LMS 100	Beginner	L&D Team	2 hr / asynch online	Self-paced Basic KSAs Required for F2F teaching
LMS 100	Beginner	L&D Team	2 hr / in-person	Delivered in-person Basic KSAs Required for F2F teaching
LMS 101	Advanced	L&D Team	Asynch online, cohort based	Weekly-paced Comprehensive KSAs for online learning LMS 100 is prerequisite Required for online teaching
LMS+	Intermediate	Canvas trainer	30 min / online & in person	Intermediate KSAs LMS 100 is prerequisite
LMS Bypass	Advanced	Faculty trainers	Online opt-out form	Allows for documentation of advanced KSAs from other sources

Appendix B: Data Collection Items for Trainees

Interview Questions

This interview is used to check in on trainees after the course is offered to ensure that they are successful in implementing their courses in Canvas LMS. Further offerings should be recommended if trainees do not feel confident in their skills or cannot successfully implement and run their courses.

Sample:

1. After the training you attended, have you felt capable when working within Canvas LMS?
2. Let us look over your course. It is okay if it is not finished. Are there areas you feel lack your intended design?
3. Are there any areas where you do not feel you can accomplish your instructional goals?
4. Where would you like to see more interactivity within the course from students or participants?
5. Do you feel like you can create those interactive modules with your current skillset?
6. Comparing what you know now after working within Canvas and what you learned at the training, were there any areas covered that did not seem relevant to you?
7. What would you like to see covered in future Canvas training offerings?

Post Training Self-Assessment

This survey will be used to analyze trainee performance a couple weeks after completing training.

Please complete the LMS skills self-assessment below using the scale below for each item:

	I have done this successfully and can teach others.	I have done this and had mixed results.	I have not been able to do this yet.
Log into Canvas to access my class			
Set up the Gradebook			
Enter and edit grades in the Gradebook			
Create an Announcement for a course			
Upload a college-approved syllabus file			
Update a Canvas course syllabus page			
[row left intentionally blank]			

Identify and modify the Canvas Dashboard			
Locate and modify the user profile			
Identify the Canvas course			
Manage and reorder the course navigation links in Canvas			
Add preferred communication channels			
Modify notification preferences in Canvas			
Access Student View for use in troubleshooting			
Participate in Canvas discussion topics			
Send a Canvas Inbox message			
Create events and assignments in the course calendar			
Change the display of the course syllabus description			
Create a simple module and add items to it			
Modify when a module is visible to students			
Upload, view and organize files and folders in Canvas course Files			
Create a Page in Canvas and add it to a module			
Add a video to a Page or Discussion in Canvas			
Add an assignment group to the Assignments page			
Create and edit a Discussion			
Create and edit an Assignment			
Explain the different types of quizzes available in Canvas			
Create and publish a Quiz			
Grade assignments in the SpeedGrader			
Manage Gradebook settings			
Create a Rubric for assignment			
Create an Outcome			
Link an outcome to a rubric			
Add a rubric to an assignment			
Migrate content to a Canvas course in variety of ways			

Appendix C: Prior Training Certification (LMS Bypass)

Name: _____

I have demonstrated my competency in the LMS through:

___ Prior completion of training at the college

___ Training at a previous college or university

___ Training from Instructure/Canvas

Please complete the LMS skills self-assessment below using the scale below for each item:

	I have done this successfully and can teach others.	I have done this and had mixed results.	I have not been able to do this yet.
Log into Canvas to access my class			
Set up the Gradebook			
Enter and edit grades in the Gradebook
