Representative Sample: Modality Specific Design Decisions Introductory Video/Session for NUR 2031

Rebecca Yost – EDP 5217 Learner Motivation

For my representative sample, I've chosen to focus on the initial impressions students have of the course. Many of the tactics chosen come from our ARCS worksheets, translated to a live, in person, synchronous course, and the online asynchronous version of the same course. Both the lesson plan and video script would use a similar slide deck, but in the asynchronous course, some motivational activities move to asynchronous assignments instead of being conducted in real time. The table below uses the tactics from Worksheet #6 to align the beginning tactics to the overall structure for both the script and the in-person lesson plan. For the script, items in bold italics indicate activities that are referred to but are conducted online or between sessions.

ARCS Tactics (Beginning)	**Asynchronous Video Script**	**Synchronous Lesson Plan**
Attention 1. Learners' attention will be initially captured through an introductory video with one of the future patients they will meet during the semester to cultivate curiosity. 2. Learners will identify primary areas of content interest (paediatric, adult, geriatric), body systems, and anticipated areas of personal or technological challenges.	1) Appears in: Video script: This is Kadir, a 3 year old patient. His mom has brought him to the clinic explaining that he's hit his arm on the playground and she's worried that he may have hurt himself badly. ***Now that they are in your clinic, how do you to help this patient? What steps would you take next as a nurse practitioner?*** Every week we'll work with new patients like this one, from paediatric to geriatric, building on what you learned in Pathophysiology about the systems of the body." 2) Appears in: Video script: "Before we dive into the course, take a few minutes to think about your goals, for the course and for your future as an NP. What did you like most in Patho? Where do you see yourself in clinical placement? Take a minute to write them down." ***Canvas Getting to Know You Survey***	1) Appears in: Slide 1 2) Appears in: Slide 3 & ***Canvas Getting to Know You Survey***

Relevance 3. Learners will write a reflection describing their personal goals – for the course and for their career, technological success, and time management. 4. Learners will review the course schedule and identify areas of personal interest they are looking forward to.	3) Appears in: Video script: "To wrap things up this week, you'll post your goals in a reflection assignment." And "We'll ask you to complete a brief survey to understand your strengths and areas of growth, both in your knowledge of nursing concepts and your technological aptitudes. This survey will help us understand how best we can support you this semester and begin work on identifying placement opportunities." ***Canvas Reflection Assignment*** 4) Appears in: Video script: "Review the weekly modules: What are you looking forward to learning most? Take a minute to write this down." ***Canvas Getting to Know You Survey***	3) Appears in: Slide 6 (Think-Pair-Share Activity) 4) Appears in: Slide 4 & ***Canvas Getting to Know You Survey***
Confidence 5. Learners will be provided with resources for technology support, a video preview of required tools and technologies, a sample time management organizer, and resources for learning and student support.	5) Appears in: Video script: "You'll have a chance to practice your exam skills at home, using technologies that simulate clinical skills at home. We'll make sure you have plenty of tech support to use these tools." ***Canvas Course Tools Page, Student Support Page, Weekly Overview Page***	5) Appears in Slide 5
Satisfaction 6. Learners will compile a list of initial concerns, for content, time management, and technologies in the discussion board for upvoting.	6) Appears in: Video script: "Then, you'll anonymously post the questions you have. Don't be shy - others will upvote, so we can see what sorts of questions we need to answer first." ***Canvas Q&A Board***	6) Appears in: Slide 7 & ***Canvas Q&A Board***

(In Person Lesson Plan; Faculty Delivery Guide)

Session Description

The purpose of this initial session is to welcome the nurse practitioner students to the course, set expectations, and set their minds at ease as they get started.

Session Objectives

At the end of this first session, students will be able to:

1. Describe the overall purpose of the course in the program
2. Identify personal goals and interests for the course
3. Connect the course topics and assessments to their long-term career goals
4. Identify student and technological supports available throughout the semester

Resources Needed

- Slide deck
- Markers/whiteboard or online polling platform for Slide 3

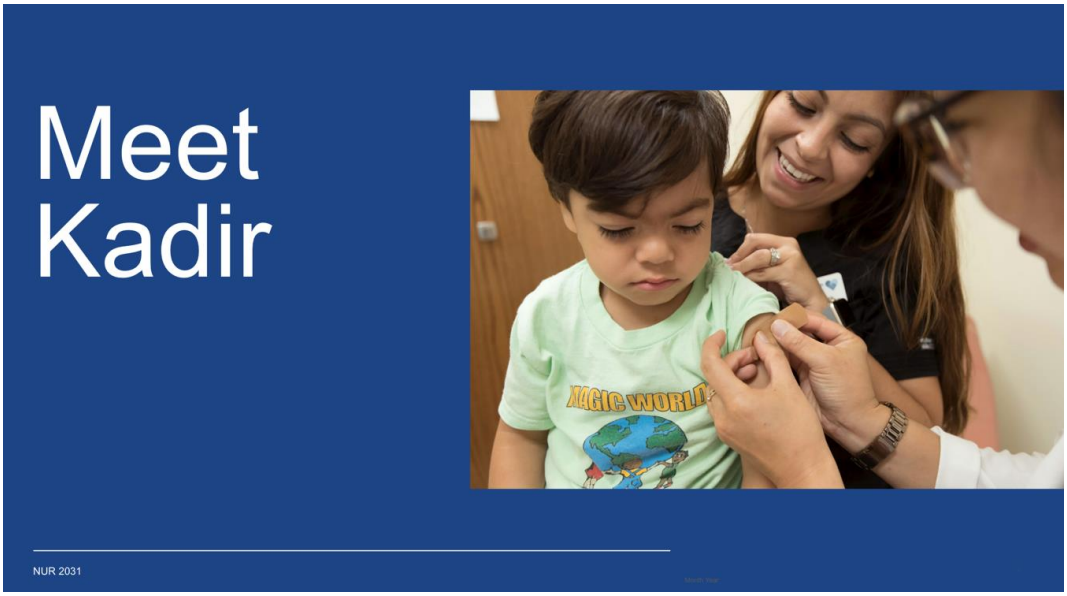

Attention/ Hook **Introductions (Faculty)** **10-20 min**	Post slide 1. Provide story about one of the "patients" students will encounter this semester (could be about cardio, paediatric, HEENT, etc depending on your expertise/preference). Pose the question: ***Now that they are in your clinic, how do you to help this patient? What steps would you take next as a nurse practitioner?*** Explain that the answer to this question (and more!) will be answered through the course. Every week students will work with new patients, from paediatric to geriatric, building on what they learned in Pathophysiology, but applying skills to consistently take patient history and conduct exams. Faculty should introduce themselves briefly (2 min each) describing their experience in the field and roles in clinical placement when the course ends.
Present Objectives **(Relevance)** **1 min**	Post slide 2. By the end of the first session, students will be able to: 1. Describe the overall purpose of the course in the program 2. Identify personal goals and interests for the course

	3. Connect the course topics and assessments to their long-term career goals 4. Identify student and technological supports available throughout the semester
Recall Prior Learning / Introductions **(Relevance)** **5 min**	Post slide 3. If in a classroom with a whiteboard, use the "Chalk talk" method to have students answer the following questions: • What topic most interested you in Pathophysiology? Why? What made it memorable? • What made you interested in becoming an NP? What experiences in history taking or physical exams have you had as an RN? After students go up and post their answers to these questions, review all comments to identify trends and experiences. This will help with the next slide.
Present Content **(Relevance, Confidence)** **10-20 min**	Post slide 4. Highlight the following: • The weekly topics in the course by system • The exam structure/sequencing • The in-person assessment component, history taking, standardized patients, and sim lab
Provide Learning Guidance **(Confidence)** **10-20 min**	Post slide 5. Highlight the following resources: • Faculty connection/office hours • Canvas space for submitting assignments • Preview additional weekly lab cases and documentation station exercises
Elicit Performance **(Relevance, Satisfaction)** **10 min**	Post slide 6. Have students conduct a think-pair-share and report out on the two following questions: • What are your long-term clinical placement and advancement goals? • What concerns or pain points do you foresee in the course, program, placement?

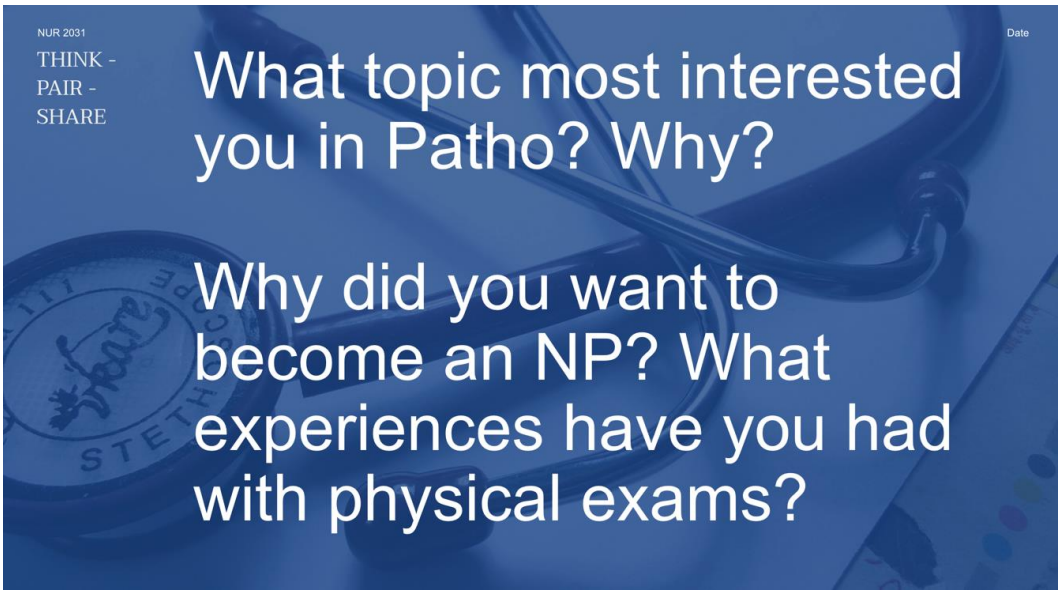

Provide Feedback **(Confidence)** **10 min**	(no slide) Walk around to the pair groups to hear their reports about their goals and concerns. Note any that appear more than once and reinforce available supports.
Enhance Retention & Transfer **(Confidence, Satisfaction)** **5 min**	Post slide 7 (wrap up) Describe the tasks students should complete before the next session: 1. Become familiar with the Canvas space. 2. Based on the conversations with peers, consider your goals more deeply and create a list of any questions/concerns that have bubbled to the top. Post these in the Canvas Q&A Board. 3. Complete the "Getting to Know You" survey on Canvas. Completing this activity helps the faculty understand each individual student's strengths and areas of growth, both in knowledge of nursing concepts, technological aptitudes, and personal challenges. This survey will help faculty understand how best to can support students this semester and begin work on identifying placement opportunities.

The following two sample slides would accompany the class session. These same slides could be reused for the synchronous video with some minor modifications.

Slide 1: Patient Hook

Slide 6:

NUR 2031
THINK - PAIR - SHARE
Date
What topic most interested you in Patho? Why?
Why did you want to become an NP? What experiences have you had with physical exams?

Representative Sample: Instructional Script
(In Person Lesson Plan; Faculty Delivery Guide)

This is Kadir, a 3 year old patient. His mom has brought him to the clinic explaining that he's hit his arm on the playground and she's worried that he may have hurt himself badly. ***Now that they are in your clinic, how do you to help this patient? What steps would you take next as a nurse practitioner?***

Every week we'll work with new patients like this one, from paediatric to geriatric, building on what you learned in Pathophysiology about the systems of the body. You'll have a chance to practice your exam skills at home, using technologies that simulate clinical skills at home. We'll make sure you have plenty of tech support to use these tools.

Then, in week 13, we'll come together in person at the Lab. This will be like a retreat!

It is a lot of work every week, but at the end of the course, you will be prepared with the skills needed for placement in your clinical supervision course.

Before we dive into the course, take a few minutes to think about your goals, for the course and for your future as an NP. What did you like most in Patho? Where do you see yourself in clinical placement? Review the weekly modules: What are you looking forward to learning most? Take a minute to write this down.

Now write down any and all questions and concerns that you have. You'll use these initial reflections as a jumping off point for the assignments for the week.

To wrap things up this week, you'll post your goals in a reflection assignment. You'll also post (anonymously!) every question you have. Don't be shy - others will upvote, so we can see what sorts of questions we need to answer first. Finally, we'll ask you to complete a brief survey to understand your strengths and areas of growth, both in your knowledge of nursing concepts and your technological aptitudes. This survey will help us understand how best we can support you this semester and begin work on identifying placement opportunities.

Welcome, and let's get started!
